

AMENDMENTS TO THE CLAIMS

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~strike through~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please CANCEL claims 21, 22, 25, and 26 without prejudice or disclaimer. Please AMEND claims 1-3, 7-9, 11-14, 16-20, 23, and 24 to read as follows.

1. (CURRENTLY AMENDED) A system for selling goods through a network, the goods being a variety of font sets which are different from each other and are sold one by one, the system comprising:

a unit storage section storing a plurality of units for each font set, each unit being a price per element corresponding to a range of elements to which the font set is to be applied, an element being a character of the variety of font sets according to the number of the font sets and ranges to each of which a unit is applied;

a detecting section detecting the number of font set elements to be purchased on the basis of information of one or more font sets to be purchased which is received from a purchaser;

a reading section reading at least one unit applied corresponding to the elements to be purchased on the basis of the number of font set elements detected from the unit storage section;

a first calculating section calculating the number of font set elements belonging to a range to which the read at least one unit is to be applied; and

a second calculating section calculating the purchase price by using the read at least one unit and the number of font set elements calculated.

2. (CURRENTLY AMENDED) A system according to claim 1 further comprising:

a purchase record storage section storing the number of font sets elements purchased by the purchaser in the past; and

an addition section reading the number of font sets elements purchased in the past from the purchase record storage section when the number of font sets elements is detected by the detecting section, and adding the read number to the detected number,

wherein the reading section reads at least one unit applied to the element to be purchased from the unit storage section by using a result of addition by the addition section.

3. (CURRENTLY AMENDED) A system according to claim 1 wherein the goods denotes a set of data as the font sets, and

the system further comprises:

a data storage section storing a set of the data;

a creating section creating a supply file including data corresponding to information of the ~~font sets~~ elements to be purchased by using the set of data stored in the data storage section; and

a supplying section supplying the created supply file to the purchaser.

4. (ORIGINAL) A system according to claim 3 wherein the creating section creates a supply file further including data purchased by the purchaser in the past.

5. (ORIGINAL) A system according to claim 3 wherein the set of data is font set data, and

a piece of the data is font data as an element of the font set data.

6. (PREVIOUSLY PRESENTED) A system according to claim 3 wherein the set of data represents sentences divided every predetermined range, and the data represents the range constructing the sentences.

7. (CURRENTLY AMENDED) A system for a purchaser to purchase goods through a network, the goods being a variety of font sets which are different from each other and are sold one by one, the system comprising:

a transmitting section transmitting information of one or more ~~font sets~~ elements to be purchased to a seller, an element being a character;

a receiving section receiving a price of the one or more elements to be purchased, ~~which is the price being~~ calculated by using at least one unit which is a price per element of an element ~~and is determined on the basis of the number of font sets~~ elements to be purchased and a range to which the unit is applied; and

a display controlling section displaying the received price on a display.

8. (CURRENTLY AMENDED) A system according to claim 7 wherein the receiving section receives a price of the element to be purchased, which is calculated by using at least one unit of an element determined on the basis of a result of addition between the number of font sets to be purchased and the number of ~~font sets~~ elements purchased in the past by the purchaser.

9. (CURRENTLY AMENDED) A system according to claim 7 wherein the goods denote a set of data as the ~~font sets~~ elements, and the receiving section receives a supply file including data corresponding to information of the element to be purchased.

10. (ORIGINAL) A system according to claim 9 wherein the receiving section receives a supply file further including data purchased in the past by the purchaser.

11. (CURRENTLY AMENDED) A goods selling system having a client and a server connected to the client through a network, the goods being a variety of font sets which are different from each other and are sold one by one,

the client comprising:

a transmitting/receiving section transmitting information of one or more ~~font sets~~ elements to be purchased, an element being a character; and

a display controlling section displaying a received purchase price on a display, the purchase price being received by the transmitting/receiving section from the server as a price of the elements to be purchased, and

the server comprising:

a unit storage section storing a plurality of units of the variety of font sets in accordance with the number of font sets for each font set, each unit being a price per element corresponding to a range of elements to which the font set is to be applied;

a second transmitting/receiving section receiving information of the elements and transmitting the purchase price;

a detecting section detecting the number of ~~font sets~~ elements to be purchased on the basis of the information of the elements;

a reading section reading at least one unit ~~applied to the element to be purchased on the basis of~~ corresponding to the detected number of element(s) from the unit storage section;

a first calculating section calculating the number of ~~font sets~~ elements belonging to a range to which the read at least one unit is to be applied; and

a second calculating section calculating the purchase price by using the read at least one unit and the number of calculated element(s).

12. (CURRENTLY AMENDED) A computer readable medium on which a program for controlling a computer to execute a process-method of selling goods through a network is recorded, the goods being a variety of font sets which are different from each other and are sold one by one, the program-method comprising:

storing a plurality of units for each font set, each unit being a price per element corresponding to a range of elements to which the font set is to be applied, an element being a character of the variety of font sets according to the number of the font sets

detecting the number of font-setselements to be purchased on the basis of information of one or more font sets to be purchased which is received from a purchaser;

reading at least one unit applied-corresponding to the element-elements to be purchased on the basis of the number of element-elements detected;

calculating the number of font-setselements belonging to a range to which the at least one read unit is to be applied; and

calculating the purchase price by using the read at least one unit and the number of font-setselements calculated.

13. (CURRENTLY AMENDED) A computer readable medium according to claim 12 wherein the program-method further comprises:

storing the number of font-setselements purchased by the purchaser in the past;

reading the number of font-setselements purchased in the past when the number of font sets is detected, and adding the read number to the detected number; and

reading at least one unit applied to the element-elements to be purchased by using a result of the addition from the unit storage section.

14. (CURRENTLY AMENDED) A computer readable medium according to claim 12 wherein the goods denotes a set of data as the font sets, and

the program-method further comprises:

storing a set of the data;

creating a supply file including data corresponding to information of the font-setselements to be purchased by using the set of data stored; and

supplying the created supply file to the purchaser.

15. (ORIGINAL) A computer readable medium according to claim 14 wherein the step of creating the supply file creates a supply file further including data purchased by the purchaser in the past.

16. (CURRENTLY AMENDED) A computer readable medium in which a program for controlling a computer to execute a ~~process~~method for a purchaser to purchase goods through a network is recorded, the goods being a variety of font sets which are different from each other and are sold one by one, the ~~program~~method comprising:

transmitting information of one or more ~~font set~~elements to be purchased to a seller;
receiving a price of the ~~element~~one or more elements to be purchased, ~~which is the price being~~ calculated by using at least one unit which is a price per element of an element and is determined on the basis of the number of ~~font set~~elements to be purchased and a range to which the unit is applied; and
displaying the received price onto a display.

17. (CURRENTLY AMENDED) A computer readable medium according to claim 16 wherein the ~~program~~method further comprises:

receiving a price of the ~~element~~one or more elements to be purchased, which is calculated by using at least one unit of an element determined on the basis a result of addition between the number of ~~font set~~elements to be purchased and the number of ~~font set~~elements purchased in the past by the purchaser and a range to which the unit is applied.

18. (CURRENTLY AMENDED) A computer readable medium according to claim 16 wherein the goods denote a set of data as the font sets, and the ~~program~~method further comprises receiving a supply file including data corresponding to information of the ~~element~~elements to be purchased.

19. (CURRENTLY AMENDED) A computer readable medium according to claim 18 wherein the ~~program~~method further comprising receiving a supply file further including data purchased in the past by the purchaser.

20. (CURRENTLY AMENDED) A system for selling goods through a network, comprising:

a storage section storing a goods purchase record of a purchaser, the goods being a variety of font sets which are different from each other;

a calculating section calculating a purchase price of goods to be purchased which is received from the purchaser on the basis of the purchase record of the purchaser stored in the storage section, ~~wherein the calculating section calculates the purchase price of the goods to be purchased on the basis of a quantity of goods in the purchase record and a quantity of the goods to be purchased;~~ and

a unit storage section storing units of the variety of goods according to the quantity of goods and a range to which each unit is applied,

wherein the calculating section calculates the purchase price of the goods to be purchased on the basis of a quantity of goods in the purchase record and a quantity of the goods to be purchased,

wherein the calculating section calculates the purchase price of the goods to be purchased by obtaining the application range to which the goods to be purchased belongs and the quantity of the goods to be purchased on the basis of a sum of a quantity of goods in the purchase record and the quantity of goods to be purchased.

21. (CANCELLED)

22. (CANCELLED)

23. (CURRENTLY AMENDED) A system for selling goods through a network, comprising:

a transmitting section transmitting information of goods to be purchased which is designated by a purchaser to a seller, the goods being elements of a variety of font sets which are different from each other, the elements being characters;

a receiving section receiving a purchase price of the goods to be purchased, which is determined on the basis of a past purchase record of the purchaser ~~in the past~~ for each type of the goods; and

a display controlling section displaying the received price onto a display.

24. (CURRENTLY AMENDED) A goods selling system having a client and a server connected to the client through a network, the client comprising:

a transmitting section transmitting information of goods to be purchased which is

designated by a purchaser to the server, the goods being elements of a variety of font sets which are different from each other, the elements being characters;

a receiving section receiving a purchase price of the goods to be purchased from the server; and

a display controlling section displaying the received price onto a display, and the server comprising:

a purchase record storage section storing a goods purchase record of the purchaser;

and

a calculating section calculating a purchase price of the goods to be purchased for each type of the goods, which is received from the client on the basis of the purchase record of the purchaser stored in the purchase record storage section.

25. (CANCELLED)

26. (CANCELLED)
